

## Why you should recommend a **ContiTech Accessory Drive Kit.**

To make sure the entire accessory drive system will operate and perform correctly for the intended life of the belt(s), it is good practice that all the system's components be changed at the same time.

Changing the tensioner and idler at the same time as the accessory drive belt(s) does not add significant time to the job. However, not replacing all the components such as the tensioners or idlers leaves weak links in the system that could cause a failure and costly repairs.

When you recommend an accessory drive kit you avoid wasting time looking up multiple SKUs, or searching racks for the right parts. And since everything the professional repair technician needs is in one box, it's much easier to price.

### **The benefits of a ContiTech Accessory Drive Kit.**

- First to market with new and innovative kits developed by professional repair technicians for professional repair technicians.
- Since kit contains all necessary components for a complete accessory drive belt service, it reduces professional repair technicians' estimating time.
- Over 32 kits for more than 214 vehicle applications, covering over 21 million vehicles in operation today.
- Competitively priced from an OE supplier you can trust.

### **OE-quality parts and only OE-quality parts.**

- OE manufacturer for belts
- OE manufacturers for idlers
- OE manufacturers for mechanical tensioners
